#### Dear Investors and Analysts,

The LANXESS management team, the structure of our group and our product portfolio have all changed profoundly since the last edition of the LANXESS Factbook was published in 2014. Thus we are pleased to have this opportunity to provide you with an in-depth look at the current state of LANXESS in this new report.

After implementing a series of critical measures necessary to stabilize and restore the company, in 2014 we made substantial progress in realigning our portfolio. This realignment was predicated on a strategy of transforming LANXESS into a company which would be less susceptible to cyclicality and produce higher returns and more stable cash flows. Looking back over the past three years, we are proud of the steps we have taken. At the same time, we are well aware that our journey has only just begun.

The three major transactions we executed following our strategic review typify how the LANXESS business model will continue to evolve in the years to come. In 2016, together with Saudi Aramco, we established ARLANXEO, a joint venture company for our synthetic rubber business. By selling a stake in this business, we acquired the resources to rapidly reshape our portfolio through external growth, adding less cyclical and more specialized businesses to our group. The 2016 acquisition of Chemours' Clean & Disinfect business is a perfect example of how we intend to complement our existing activities and achieve greater economies of scale. The 2017 acquisition of Chemtura – the largest acquisition in the history of LANXESS – substantially enlarged our footprint in the profitable additives business and provided us with critical mass in the United States, which we will build on moving forward. The completion of these three transactions marked the close of the first chapter.

The second chapter of our story has just begun, and we are working to integrate Chemtura swiftly and efficiently into the LANXESS organization and realize the synergies to be derived from the acquisition. Looking ahead, we intend to make significant new improvements to the structure of our company. In the short term, our focus will shift to organic growth as we strengthen our balance sheet to enable further mergers and acquisitions. We have recently detailed several growth projects that will form an important part of our existing €400 million investment program through 2020. Most of these investments take the form of brownfield expansions that will deliver attractive returns on capital employed and improve the group's earnings. However, we will remain fully engaged in the active management of our portfolio as we seek to sustain the current rapid pace of our transformation, unlock the value inherent in our existing activities and reward our shareholders.

We are committed to continuing our work, and we are grateful for your ongoing support and trust.

Sincerely,

Mr. Zu Sel

Matthias Zachert Chairman of the Board of Management

# **INVESTMENT HIGHLIGHTS**

LANXESS is one of the world's leading chemical companies, marked by its strong focus on cash generation.

#### STRONG FOUNDATIONS

With its global presence, its leading positions in several businesses, its diversified portfolio of technology-driven products, and its engagement in markets that benefit from sustainable growth trends, LANXESS remains a strong competitor in the chemical sector with significant upside potential.

#### **CLEAR STRATEGY**

The company's management will continue to work on implementing its clear strategy to create a more resilient, more cash generating company that is active in small to midsized markets, in which LANXESS will hold a clear leadership position.

#### FOCUS ON CASH GENERATION AND FINANCIALS

The company will continue to strengthen its ability to generate free cash flow and, as a result, to seek fresh opportunities for enhancing shareholder value.

This approach will remain based on solid investment grade financials.

#### ENTREPRENEURIAL AND DYNAMIC CULTURE

LANXESS' mindset and culture are agile and dynamic. Through this culture the company is able to seize opportunities in a fast changing industry.

## Lubricant Additives Business: Unique integrated portfolio for **lubricants**

High-quality products for high-performance applications

LANXESS Fact Book - Specialty Additives: Additives

## High-quality Lubricant Additives products benefit from environmental awareness and regulation

#### Wind turbines

- Synton<sup>®</sup> high-viscosity polyalphaolefins (pAO) are used in gear oils for wind turbines, and in industrial and automotive applications
- Green energy
- Longer product life

#### **Emissions and fuel economy**

- Additin® new organic friction modifier delivers significantly enhanced friction reduction, performance retention and antiwear protection
- Improved fuel economy
- Benefits from stricter emission regulations

#### **Automotive emissions**

- Naugalube® antioxidants prolong lubricant life and help reduce automotive emissions
- Naugalube® friction modifiers help reduce friction and fuel consumption in automobiles
- Benefits from stricter Corporate Average Fuel Economy (CAFE) standards in the US
- Benefits from stricter EU regulations on low CO<sub>2</sub> emissions

#### Reduced equipment wear

- Elevance Aria<sup>™</sup> WTP 40 esterfunctionalized high-viscosity base stock
- Enhanced performance
- Reduced equipment wear in transportation and industrial applications

#### Detergents

- Lobase®, Hybase® detergents with low reactivity, corrosion protection and extreme pressure (EP) performance
- Enables lubricants that protect engines operating on varying quality fuels

#### Sustainable refrigerants

- Hatcol<sup>®</sup> and Everest<sup>®</sup> help to phase out ozone depleting refrigerants
- Stricter regulation drives replacement of existing chlorofluorocarbon (CFC) and (HCFC) refrigerants with more sustainable hydrofluorocarbon (HFC)

## Plastic additives are an indispensable part of modern life

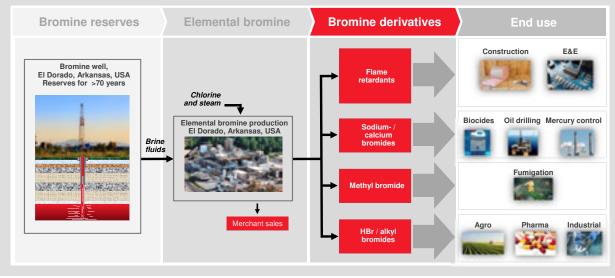

Flame retardants	Safe for toys and food contact	Giving plastics longer life
<ul> <li>Fire safety requirements:</li> <li>1) Prevent fire 2) Generate as little smoke as possible and delay the fire from spreading</li> </ul>	<ul> <li>Plasticizer solutions that are safe in human contact or food</li> </ul>	<ul> <li>Products made from plastics and polyurethane wear extremely fast on contact with water or acids</li> </ul>
LANXESS products offer highly- efficient fire protection paired with other advantages like easy processability or high elasticity	<ul> <li>We offer plasticizing solutions for a broad range of specialty applications, e.g.:</li> <li>Toys</li> <li>Products in contact with aqueous based foodstuffs</li> <li>Human contact, e.g. gloves, swimming floats, film for water beds</li> <li>Sealants and casting compounds for the construction sector</li> </ul>	► LANXESS' stabilizers extend the lifespan of products by up to three fold. Only this prolonged service life allows the use of these materials in critical applications
Disflamoll <sup>®</sup> , Reofos <sup>®</sup> , Levagard <sup>®</sup> , Uniplex	Mesamoll <sup>®</sup> II is suitable for a large number of demanding applications	Stabaxol® works effectively against hydrolysis in a wide range of polymers

## Proprietary development of permanent bladder coatings completes bladder product portfolio

#### Release agents

- Preventing the tire from sticking to the mold or bladder during the curing process
- Enabling smooth and cost-efficient tire production process

#### Bladders

- Used in the manufacture of tires
- High-performance curing bladders can significantly increase the productivity of a tire plant
- Sizable bladder market shows healthy growth rates in line with tire demand
- Opens up additional growth potential as major tire companies outsource bladder production

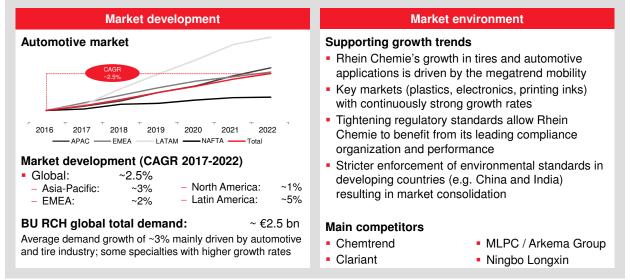

#### Permanent bladder coatings

- First production in automated line in 2017
- Improve the efficiency and quality of tire vulcanization
- Enable tires to be vulcanized without the need for tire spray solutions containing silicones
- In particular used for tires with runflat, self-sealing and noise-reducing properties

Rhein Chemie is the only global player for release agents and bladders with permanent bladder coating for tire manufacturing out of one hand

LANXESS Fact Book - Performance Chemicals: Inorganic Pigments

# The Ningbo Process<sup>®</sup> technology ensures for the first time an eco-friendly production of red iron oxide pigments in China

- In Ningbo, China, LANXESS is operating the world's most modern plant for iron oxide pigments
- 25,000 metric tons of synthesis capacity for yellowish red pigments and 70,000 metric tons mixing and milling
- The unique Ningbo Process<sup>®</sup> is based on patented technology (utility patent) and sets a new benchmark for sustainable iron oxide production
- LANXESS now covers the entire spectrum of red pigments from a single source
- Furthermore, entirely new color spaces can also be produced using the Ningbo Process<sup>®</sup>

## High Performance Materials: Engineering plastics with backward-integration into strategic intermediates

#### Overview

#### Key facts

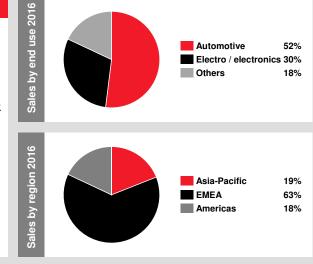

- BU HPM provides a wide range of engineering plastics (compounds) to core industries across the world
- Upstream-integration in strategic raw materials
- Supported by a global production and R&D network with cost leadership position based on world-scale production assets

India: Jhagadia

USA: Gastonia

#### **Production sites**

- Belgium: Antwerp
- Brazil: Porto Feliz
- China: Wuxi
   Germany: Brilon, Dormagen, Hamm-Uentrop, Krefeld-Uerdingen

#### Financials

## Urethane Systems is specialized on systems to manufacture high-performance polyurethane elastomers

LANXESS Fact Book – Engineering Materials: Urethane Systems

## Urethane Systems has set clear innovation priorities focused on customers' needs

Continuous innovation to deliver improved solutions for industry and customer needs by operating a global network of industry leading R&D and application development centers

#### Our priorities for our innovation activities are

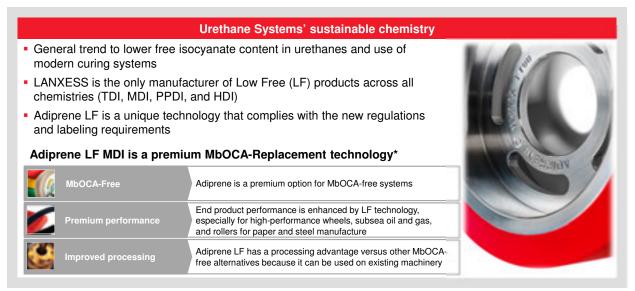

- Improve Low Free (LF) technologies
- Develop new curing systems (e.g. MbOCA\* Replacement)
- Develop thermoplastic polyurethanes that take products to new extremes (e.g. Ultralast<sup>®</sup>)
- Enable processing advantages to cast polyurethane processors (e.g. Ribbon Flow<sup>®</sup>)
- Develop and tailor cast systems to replace non-cast materials. This would open new market segments for innovative urethane solutions
- Develop high-performing solutions that extend the usable life of urethane components

\* MbOCA = curing agent used primarily to produce castable polyurethane parts. It is classified as cancerous and will be banned in the EU
